#### **DETAILED ACTION**

The board has returned the application to the examiner to address some of the issues (i.e., new ground of rejections) raised by the applicant in the reply brief filed on 04/14/2009. Thus in view of this decision by the board, PROSECUTION IS HEREBY REOPENED. To avoid abandonment of the application, appellant must exercise one of the following two options: (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or, (2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

#### ***Allowable Subject Matter***

Claims 1-3, 5-7, 22, 23, 25-35, 37, 39 and 40 are allowed.

#### ***Examiner's Statement of Reason for Allowance***

The following is an examiner's statement of reasons for allowance for all claims:

**Re claims 1, 22, and 31.** The prior art fails to disclose a market analysis system comprising: a computer processor; a computer readable storage medium; a database stored on the computer readable storage medium comprising aggregate transaction data; and a software program stored on the computer readable storage medium executable by the processor to: receive a set of transaction data from an electronic exchange where market transactions are conducted

electronically via the Internet; store the set of transaction data in the database; categorize products and services from the aggregate transaction data into a plurality of standard pricing groups according to configuration information received at the market analysis system from one or more suppliers that participate in the electronic exchange, wherein the configuration information includes standard pricing group attributes, wherein the standard pricing group attributes include a value corresponding to a delivery term, a locale, a product, a service, a customer type, a time scale, or a sales channel determine at least one statistical analysis to be applied to one of the plurality of standard pricing groups; define starting values and default parameters of the at least one statistical analysis to be applied to the standard pricing group; apply the at least one statistical analysis to the standard pricing group to derive a set of results, wherein the set of results include a time- windowed relationship within the standard pricing group; and communicate the set of results from the at least one statistical analysis to a supplier that participates in the electronic exchange.

The closest prior art is also the best U.S art: Walter (US PAT: 6,334,110). Walter discloses a system and method for temporally analyzing customer transactions and interactions in order to classify customers into clusters. Walter captures information about customer interactions and transactions over time, classifies customers into one or more clusters based on their time-based interactions and transactions, and uses this classification to perform selected target marketing or cross-selling (see the abstract fig.3-fig.6 of Walter). Indeed, Walter mentions “profile-based segmentation” and the categorization of customers into temporal segments. However, Walter fails to categorize products and services from aggregate transaction data into a plurality of standard pricing groups, wherein standard pricing group attributes include a value

corresponding to a delivery term, a locale, a product, a service, a customer type, a time scale, or a sales channel. There is no mentioning of standard pricing group anywhere in Walter.

Further, Anderson, a secondary reference (US PAT:5,974,396) discloses gathering product information that uniquely identifies a product by type and manufacturer, grouping that product information into product clusters, and analyzing consumer retail transactions in terms of the product clusters to determine relationships between the consumers and the products (see the abstract). However, Anderson does not "categorize products and services from the aggregate transaction data into a plurality of standard pricing groups according to configuration information received at the market analysis system from one or more suppliers that participate in the electronic exchange.

Lastly, the combination of Walter and Anderson fails to meet the applicant's claimed limitations of "categorize products and services from aggregate transaction data into a plurality of standard pricing groups, wherein standard pricing group attributes include a value corresponding to a delivery term, a locale, a product, a service, a customer type, a time scale, or a sales channel." Updated searches revealed no references that disclosed the claimed inventions nor were any secondary references identified which could be reasonably combined with the primary reference, Walter. The drawings submitted on 02/07/02 are acceptable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance.
